

CENTRE DE FOIRES, EXPOCITÉ NOTES ABOUT ELECTRICITY, WATER, NATURAL GAS AND HANGING

Electricity

- When the exhibition does not provide space between booths, an electrical panel for sub-distribution could be located in your booth even if no electricity was ordered.
- In addition to 120 volts outlets, please note that the power of the Centre de foires is in 208 and 600 volts. Any other requested voltage will bring additional costs. Please, specify voltage, number of phases and attach a plan, a picture or a detailed description of the connectors.
- If there is no connector, make sure to include connection fees required for each device.
- All equipment requiring an electrical connection must have a cable on the outside of the unit ready to be connected.
- By default, the electricity comes from traps located in the floor of the Centre de foires. If you want your outlet(s) coming from the ceiling, hanging fees will apply. Please contact us for details.

Water

- The water supply is in ½ hoses. Make sure you have the necessary adapter. If not, charges will apply for each device connections.
- The hoses come exclusively from the traps in the floor.

Natural gas

- For each piece of equipment that requires a natural gas connection, it is very important to indicate the BTU consumption.

Hanging

- If the weight of the module you want to hang exceeds 80 lbs / 36 kg or if the size seems too big, please contact us. Whenever possible, attach a plan or description of it.
- No equipment hanging will be done for orders received less than 4 hours prior to aisle carpet installation or 4 hours before the opening of the exhibition.
